

Getting started with Pipelines

First things first

Before creating your first pipeline, you'll need to set up a few components. This guide will walk you through creating connectors, defining your data model, and launching your first pipeline.

1 Get your access token

The access token is required to use the API or the embeddables. To generate a new token you need your organization's license key as well as your identifier (by default, this is the email address you've logged in with).

License key:

quLreL4o4+X9JaR3oM8KEWufxC+5HXtewJtQI0uK1k8=

Identifier:

giangvo0206@gmail.com

cURL JavaScript

```
curl -X 'POST' 'https://api-gateway-develop.ingestro.com/dp/' \
-H 'accept: application/json' \
-H 'Content-Type: application/json' \
-d '{
  "license_key": "quLreL4o4+X9JaR3oM8KEWufxC+5HXtewJtQI0uK1k8=",
  "auth": {
    "identifier": "giangvo0206@gmail.com",
    "type": "USER"
  }
}'
```

Try it!

Response:

Click "Try it!" to send the request and see the response here.

2 Create an input connector

The input connector defines where your input data comes from and how the pipeline is triggered. [Documentation](#)

Supported connector types:

- HTTP(S)
- (S)FTP
- AWS S3
- Azure Blob Storage
- Google Cloud Storage
- E-mail
- Manual (file upload via embeddable UI)

Trigger types:

- Time-based: Scheduled runs (hourly, daily, weekly, etc.)
- Event-based: Runs when data is sent/uploaded

File formats & limits:

- Supported formats: XLS(X), CSV, TSV, PSV, JSON, XML
- Size limits vary by connector type (e.g., E-mail max 25 MB)

Create an input connector via our "Create connector" component

+ Create connector

Input connector name *

New manual connector

cURL JavaScript

```
curl -X 'POST' 'https://api-gateway-develop.ingestro.com/dp/' \
-H 'accept: application/json' \
-H 'Content-Type: application/json' \
-H 'Authorization: Bearer ' \
-d '{
  "name": "New manual connector",
  "type": "INPUT",
  "node_type": "MANUAL",
  "files": [],
  "trigger_type": "EVENT_BASE",
  "permissions": {
    "level": "PUBLIC"
  }
}'
```

Try it!

Response:

Click "Try it!" to send the request and see the response here.

3 Create an output connector

The output connector defines where your data is sent after each execution. [Documentation](#)

Supported connector types:

- HTTP(S)
- (S)FTP
- AWS S3
- Azure Blob Storage
- Google Cloud Storage
- E-mail

File formats & limits:

- Supported formats: XLS(X), CSV, TSV, PSV, JSON, XML
- Size limits vary by connector type (e.g., E-mail max 25 MB)

Output connector name *

New email output connector

Recipient email *

giangvo0206@gmail.com X

cURL JavaScript

```
curl -X 'POST' 'https://api-gateway-develop.ingestro.com/dp/' \
-H 'accept: application/json' \
-H 'Content-Type: application/json' \
-H 'Authorization: Bearer ' \
-d '{
  "name": "New email output connector",
  "type": "OUTPUT",
  "node_type": "EMAIL",
  "trigger_type": "EVENT_BASE",
  "permissions": {
    "level": "PUBLIC"
  }
}'
```

Create an input connector via our "Create connector" component

+ Create connector

```
    "type": "OUTPUT",
    "node_type": "EMAIL",
    "configuration": {
      "file_extension": "csv",
      "file_name": "test",
      "recipients": [
        "giangvo0206@gmail.com"
      ]
    },
    "files": [],
    "trigger_type": "EVENT_BASE",
    "permissions": {
      "level": "PUBLIC"
    }
  },
  "files": [],
  "trigger_type": "EVENT_BASE",
  "permissions": {
    "level": "PUBLIC"
  }
}
```

Try it!

Response:

Click "Try it!" to send the request and see the response here.

4 Create a target data model

The target data model specifies the structure that your input data will be transformed into. [Documentation](#)

Columns:

- **label:** Display name in the UI
- **key:** Technical name used by our system
- **columnType:** Data type (see examples below)

Type	Description	Example
T STRING	Free text	Hello World
123 INT	Whole number	42
123 FLOAT	Decimal number	19.99
@ EMAIL	Email address	user@example.com
📅 DATE	2024-05-10	2024-05-10
🏠 IBAN	IBAN number	0123456789123
🏠 GTIN	GTIN/EAN code	DE8937040044053 2013000

Validations:

- **Mapping validation:** Rule for when a column must be mapped
- **Data validations:** Rules for the value of each entry
- **Advanced validations:** Backend API calls to validate values
- **Advanced cleanings:** Backend API calls to clean or normalize the input data

Create a target data model via our "Create target data model" component

+ Create target data model

Target data model name *

New TDM name

cURL JavaScript

```
curl -X 'POST' 'https://api-gateway-develop.ingestro.com/dp/' \
-H 'accept: application/json' \
-H 'Content-Type: application/json' \
-H 'Authorization: Bearer ' \
-d '{
  "name": "New TDM name",
  "columns": [
    {
      "key": "company_name",
      "label": "Company name",
      "columnType": "string",
      "mappingValidation": {
        "logic": "mapped('company_name')",
        "errorMessage": "Column has to be mapped."
      }
    },
    {
      "key": "company_name",
      "label": "Company name",
      "columnType": "string",
      "mappingValidation": {
        "logic": "mapped('company_name')",
        "errorMessage": "Column has to be mapped."
      }
    },
    {
      "key": "company_name",
      "label": "Company name",
      "columnType": "string",
      "mappingValidation": {
        "logic": "mapped('company_name')",
        "errorMessage": "Column has to be mapped."
      }
    }
  ]
}
```

Try it!

Response:

Click "Try it!" to send the request and see the response here.

5 Embed the CreatePipeline component

The CreatePipeline embeddable component enables you to integrate a UI-driven creation flow directly into your platform. Choose your preferred framework and insert the provided code snippet wherever you'd like the component to appear.

React Angular Vue.js JavaScript

```
<CreatePipeline
  accessToken=""
  configuration={{
    developerMode: false,
  }}
  settings={{
    i18nOverrides: {},
    language: "en",
    modal: true,
    allowTdmCreation: false,
    allowInputConnectorCreation: false,
    allowOutputConnectorCreation: false,
    runPipelineOnCreation: false,
  }}
  onPipelineCreate={({ data, execution }) => {
    // runs after the user has confirmed the final step of the flow to create a pipeline
    // data: pipeline object after creation
    // execution: object of the execution created (only if runPipelineOnCreation == true)
  }}
/>
```

Learn more about implementing our embeddable components in our [Documentation](#).

</> Create pipelines

The quickest way to explore the features, speed, and simplicity of the Ingestro data pipelines is by utilizing our pipeline components right here in our user platform.

Create pipeline
